

2-Way Lamp Module LM14A

INSTALLATION AND OPERATING INSTRUCTIONS

1. Set the black Unit Code dial on the front of the Module to the desired number between 1 and 16.
2. Set the red Housecode dial to the same letter as your X10 Controllers or the same letter as used with your CM11A 2-Way Computer Interface and ActiveHome software.
3. Make sure the lamp (incandescent only) you want to control is turned on, and unplug it from its outlet.
4. Plug the lamp into the module.
5. Plug the module into the AC outlet.

To turn the module on/off, press the number corresponding to its Unit Code on any X10 controller, then press on/off. You will notice that the module has "Soft Start," meaning that it gradually dims up from Min. to Max. brightness when you turn it on.

Note: the LM14A is a 2-Way module so you can poll it (ask it for its status) from the CM11A 2-Way Computer Interface and ActiveHome software. ActiveHome will ask the LM14A for its status and the module will report back to indicate whether it is on or off. The ActiveHome software will then update the graphics on your computer monitor screen to show the status of the module. See your owner's manual for the ActiveHome system for more information.
